

The provision of specialist knowledge and expertise can be a crucial aspect of success in any project. Our specialists are able to provide documentary, desktop and on scene expert support via a range of deliverables.

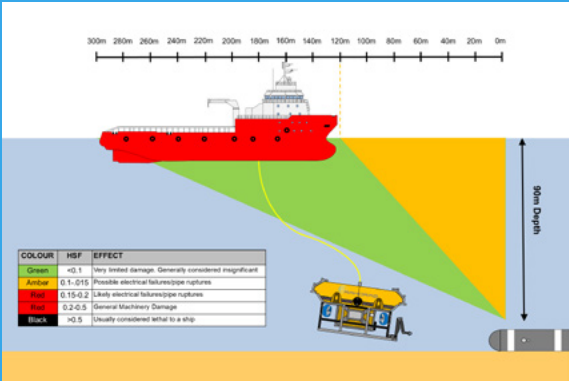

These include:

UXO RISK ASSESSMENTS/DESK BASED ASSESSMENTS

By utilising their specialist knowledge and experience in EOD, Ramora UK Explosive Officers are equipped to provide a unique insight to potential UXO risk in an area, along with measures that can be taken to mitigate these risks and ensure a safe working environment during ground works on a site.

EXPLOSIVES ADVICE

Through our 24/7 Control Room, Ramora UK can provide expert advice on explosives whenever it is required. Our Control Room gives you access to a Senior Explosive Officer who can offer advice on any potential item of UXO uncovered, or explosive item on site. This includes identification of the item and inherent risks, actions that should be taken to ensure safety on site and advice on the next steps to take. Further information on our Control Room can be found on our Emergency Response Page.

EXPERT WITNESS

Our Senior Explosives Officer is available to assist as an expert witness with any legal matter involving the use of explosives. He has been engaged on a number of matters ranging from maritime incidents to terrorism related issues.

CONSTRUCTION TOOLBOX BRIEFS

Our EOC Engineers are available to provide a hands on safety brief at the start of a project or following a personnel change on site, to ensure everyone is correctly informed and what immediate actions should be instigated should the threat of UXO arise.

EXPLOSIVE LICENCE APPLICATIONS

Due to our understanding of current legislation and ongoing liaison with the UK licensing authorities (the Health and Safety Executive (HSE), Trading Standards and Police), Ramora UK are in a prime position to aid in the assessment of explosive stores and locations as well as the licence application itself. Our Explosive Officers can assess a site, provide an appropriate explosive store based on desired location and use and liaise with relevant licensing authorities to ensure that a site is licensed both legally and safely for the storage of explosive items.

MARINE LICENCE APPLICATIONS

We are also able to compile applications for the disposal and relocation of maritime UXO on offshore Renewables and Oil and Gas sites.
